ACKNOWLEDGEMENTS

The information contained within this publication would not have been possible without the joint effort and cooperation of the Montana SOICC's Technical Steering Committee (TSC). The TSC consists of representatives from the SOICC's six member agencies, and they are recognized for their continued guidance and support. Current TSC members include:

- o Phil Brooks, Office of Research and Information Services, Department of Commerce
- o Rick Deady, Employment Policy Division, Department of Labor and Industry
- o Paul Dunham, Office of the Commissioner of Higher Education, University System
- o Mickey Hines, Job Service Division, Department of Labor and Industry
- o Bob Jahner, Rehabilitative Services Division, Department of Social and Rehabilitation Services
- o Leonard Lombardi, Department of Administrative Vocational Education Services, Office of Public Instruction
- o Bob Rafferty, Research and Analysis Bureau, Employment Policy Division, Department of Labor and Industry
- o Anne Wolfinger, Montana Career Information System

Special thanks are extended to the staff people at the Montana Career Information System; the Office of the Commissioner of Higher Education, Montana University System; the Office of Research and Information Services, Department of Commerce; the Research and Analysis Bureau and the Job Service Division, Montana Department of Labor and Industry; Department of Administrative Vocational Education Services, Montana Office of Public Instruction, and the Rehabilitative Services Division, Montana Department of Social and Rehabilitation Services. All offered valuable insight into the needs of the audiences and users they serve.

The efforts of Kate Kahle, SOICC Data Base Technician, have made a considerable contribution to this publication. Kate updated, edited, typed, proofread, and assisted in writing much of the information contained within the 1988 edition of the "Montana Supply/Demand Report."

Points to Remember About the Montana SOICC

- o The Montana SOICC is a committee.
- o The SOICC and its work are really an extension of each of its member agencies and their individual agency work.
- o All of the SOICC's work is accomplished through interagency cooperation.
- o The SOICC compiles data from many agencies, then processes and analyzes the data in a technically appropriate manner to produce information usable by program planners, administrators and people making career decisions.
- o The SOICC's work minimizes duplication between agencies and improves the availability of useful information (particularly important in times of reduced budgets).
- o The SOICC provides a formal structure that links the work done by education and labor agencies in Montana.
- o The SOICC is responsible for designing, implementing, and maintaining a statewide, comprehensive Occupational Information System (OIS) based on current supply (workers) and demand (jobs).

Introduction

A continuing challenge facing education and training institutions is to identify, design, and offer training programs that serve both the needs of individual participants and the needs of the economy and society as a whole. It is crucial that training programs designed to prepare individuals for specific occupations be realistic in light of anticipated job openings (demand) and the expected number of persons available for and prepared to fill them (supply).

While a number of factors must be considered in the design of training strategies, it is clear that occupational information can serve as a valuable asset to the planner. Recent legislation--in particular, the Carl Perkins Vocational Education Act of 1984 and the Job Training Partnership Act (JTPA) of 1982--have stressed the value of providing and using occupational information. By mandating the development of national, state and local occupational information systems (OIS), the common occupational needs of vocational education and employment and training programs can be met, and special attention to the labor market information needs of youth and adults can also be given.

An OIS adds an important dimension to planning processes because it provides comprehensive data on current and anticipated labor market conditions. Access to this information has several potential benefits for education and training institutions. For example, it may enable these institutions to play a greater role in economic development efforts or to respond to employers' needs in a more systematic and timely fashion. The OIS offers planners a broad perspective of employment needs and an efficient means of learning about local labor market conditions.

An OIS, however, cannot provide a planner with a definite quantitative indicator of what to do about a program (for example, "30 additional people need to be trained in program X"). Analysis and interpretation of possible causes for labor imbalances is not an exact science. Judgment, reason, and the experience of the planner, program advisory groups, and others all need to be considered in analyzing occupational information as a factor in program planning decisions.

An OIS can help planners make better informed decisions. It saves time and increases efficiency by flagging potential problems and verifying areas that are performing well. This allows planners to focus their attention and limited resources on areas that require action.

An OIS can also provide planners with documentation to justify program decisions and thus aid in obtaining approval of plans and funding. In times of limited resources, demonstrating the potential impact of a program on the economy of the community and the state could prove to be a critical point in obtaining funding. Use of a comprehensive integrated OIS can help planners justify decisions on the basis of economic impact and answer questions that may be raised in the plan approval process.

The data can also help identify potential trouble spots in the performance of programs and related labor market conditions that may be causing them. OIS information can help educational planners develop programs that address the real and emerging needs of the economy.

Local governments can use information about employment, the supply of skilled workers, and the availability of training programs to attract new businesses and industry. The system can provide information on occupational and employment

trends to entrepreneurs who want to start small businesses.

Planning decisions can have broad policy implications and do involve consideration of many factors other than labor market conditions. Among them are:

- Financial resources
- Availability of qualified teachers
- Presence of tenured faculty
- Space
- Facilities
- Equipment
- Materials and curricula
- Student interest

Final recommendations regarding planning decisions frequently involve compromises or trade-offs of some kind between competing goals or objectives. These decisions can only be made by persons involved with and responsible for administering programs. What an OIS can provide is a common data base for coordinated planning within a state and a way for planners to identify and analyze areas that need attention.

The primary purpose for establishing SOICCs was, and continues to be, the development, implementation and maintenance of a comprehensive occupational information system based on supply (workers) and demand (jobs). These data, in conjunction with data from the Montana Career Information System (MCIS), are used to support the career planning, guidance, and job search needs of various target populations.

Organization of Reports

The reports in this publication are made up of demand, supply, and analysis data.

The reports are organized by clusters. A cluster is the grouping of education/training programs that have common curricula, and common occupations that can be entered as an outcome of the training. Occupational demand, supply, and analysis characteristics are related to each other by being organized into clusters. Montana's OIS currently contains 75 clusters.

The reports are organized alphabetically by major cluster (i.e., Agriculture Cluster, Communications Cluster), then by subcluster (i.e., AG01 Agriculture Business, CM01 Mass Communications). There is a demand, supply, and analysis report for most clusters. (Some clusters, such as "LA01 Liberal Arts and Foreign Languages," may not have Montana data for all reports.)

All reports are identified at the top by what data they represent, e.g., "Demand Report," "Supply Report," or "Analysis Information." The reports also show the cluster title and number.

Title and Code reflect the title of the occupation or training program, in relation to the reporting system being used for each type report.

- Demand: Demand information is reported in Occupational Employment Statistics (OES) code. The OES is an eight-digit code.

- Supply: Supply information is reported in Classification of Instructional Programs (CIP) code. The CIP is a six-digit code.
- Analysis: Analysis information is reported in Dictionary of Occupational Titles (DOT) code. The DOT is a nine-digit code.

A description of data elements for each type of report follows.

Demand Information

Demand is defined in this report as estimated jobs based on current industry surveys. The demand portion of this report consists of elements defined below.

OES Matrix Code (Occupational Employment Statistics) refers to an eight-digit code derived from an OES five-digit survey code, plus a three-digit suffix number, that is usually--but not always--compatible with other occupational classification structures.

Demand Data Elements:

1986 Employ (1986 Employment) refers to the number of people who were employed in Montana by occupation at the time the OES survey was completed.

1995 Employ (1995 Employment) refers to an estimate of the number of people expected to be employed in the corresponding occupation in 1995. These data are computed by incorporating two factors: 1) openings due to growth or decline in the level of occupational demand, and 2) replacement demand resulting from labor force separations. Growth and decline in occupational demand occur because of changes in business/economic conditions and technological advancements. Projections are formulated with procedures established by the U.S. Department of Labor's Bureau of Labor Statistics. Projections are later used to convert industry employment (captured via survey) to occupational employment in each industry. Results are totalled across industries to obtain projected employment by occupation.

Estimated Annual Growth refers to the average annual growth due to business/economic fluctuations and technological advancements.

Estimated Annual Replac (Replacements) refers to job openings that occur as individuals leave their respective occupation because of retirement or death. Job openings which occur due to occupational transfers and migration are not incorporated because valid data are not available at this time.

Estimated Annual Open (Openings) is comprised of two components: 1) job openings resulting from industry growth, and 2) job openings resulting from separation (deaths and retirements). Together, these components comprise total average annual openings by occupation.

Totals contains the cluster total of the demand report. By comparing the cluster total of average annual openings to the supply cluster totals, a comparison of the average annual job openings and the number of individuals trained (and seeking work) in this occupation is shown.

Ultimately, a determination is made to substantiate whether or not training programs should be increased, decreased, or modified using new curricula.

Limitations in OES Data: Occupational employment projections produced by the OES program should not be considered precise measurements, but are "best estimates" based on a sample of Montana employers and historical industry employment trends. OES demand data offers users a standard and useful tool for making planning decisions. There is no source of available data that will give users an exact and current picture of occupational demand in their area. Users of demand data should be aware of the following:

- The data cover non-agricultural wage and salaried workers only (not agriculture or self-employed workers).
- Staffing patterns are based on statewide data and do not reflect possible variations from area to area of the state;
- Data are estimated, based on past trends, and therefore cannot predict unusual current or future economic conditions, or capture new occupations;
- Data should be used as estimates, not as exact figures for a particular point in time for the state; and
- Average annual openings reflect growth and replacement, not current openings due to turnover and mobility.

Further OES Information

Montana's 1995 industry/occupation projections were produced to provide reliable estimates of occupational demand. The projections were produced using a matrix based on the OES survey. This matrix deals with employers rather than households.

There are three major components to the Occupational Employment Statistics program:

- 1) Survey of non-farm wage and salary employment. The OES survey involves a periodic mailing of survey forms to non-agricultural employers. This is done in a three-year cycle. Different major industries are surveyed each year so that the entire sample is completed every three years.
- 2) Industry/Occupation matrix of staffing patterns. The matrix is a model representing the occupational staffing patterns of each industry. The staffing patterns are based on the result of the OES survey. An important function of the matrix is that it shows where people work (industries) and what they do (occupations).
- 3) Projections. The third component of the program is the projections, which is the primary goal of the OES program. There are three elements of the projections: industry projections, occupation projections, and job openings. Job openings are made up of openings due to growth and separations from the labor force.

The projections show what is likely to happen barring major changes from past trends. The major economic assumptions used by the U.S. Bureau of Labor Statistics have been observed in these projections. The assumptions

are as follows:

- The institutional framework of our economy will not change radically;
- There will be no major events such as a widespread, long-lasting energy shortage or a war which would significantly alter the industrial structure of our economy or the rate of economic growth; and
- Current technological, scientific, and social trends, such as values placed on work, education, income, and leisure, will continue.

The projection information can help us look into the future with some confidence. It is necessary to match individuals and jobs to decrease unemployment and increase job satisfaction; this could also benefit the business community and taxpayers. Through the use of the information provided, better decisions can be made for the future by having a more realistic knowledge of Montana's employment trends.

Supply Information

Supply is defined as workers. Current Supply is the number of individuals currently employed in a particular occupation, plus the number of individuals qualified and currently seeking employment in Montana in that occupation. Montana's Occupational Information System (OIS) focuses on those who are trained and available for employment in specific occupations in Montana at given points in time. An explanation of all elements contained within that report follows.

Completers is defined as the number of people completing training programs in Montana. Each training agency reports completers using the six-digit Classification of Instructional Programs (CIP) code. Data in this report are for the school year 1986-1987.

The numbers to the right of the CIP codes reflect the number of completers (supply of workers) trained by the various training agencies.

A common limitation in reporting completers is duplication between reporting agencies. Through studies, it has been determined that the duplication rate for completers is not more than 10% between and among state agency reporting systems.

Supply Data Elements:

Public Second (Secondary) refers to the number of high school students who have completed a vocational education training program and are available for work in the state. The number of high school completers is an estimate based on an average of two years of actual data (82-83 and 83-84 school years). Funding restraints have curtailed the collection of this data at this time and for the foreseeable future.

Limitations in this report focus on duplication. Class-based reporting systems may result in duplicate program enrollment or completion counts and follow-up data may be used on a limited sample size.

Voc Tech (Vocational Technical) represents completers from the five Vocational Technical Centers statewide. Again, class-based reporting often results in duplicate program enrollment or completion counts. Follow-up data may be based on a limited sample size, and a large number of postsecondary enrollees and completers are employed while learning.

Higher Educ (Higher Education) lists all certificates and degrees conferred from all units of the Montana University System, including universities, state, tribal and community colleges and private colleges. Limitations in this reporting include those mentioned above, unavailable comprehensive follow-up data, and the fact that non-accredited colleges and universities are excluded from reporting systems. Supply information here reflects only the actual number of degrees and certificates awarded.

JTPA (Job Training Partnership Act) refers to information that was compiled using the JTPA client file. We used data for eligible clients who received and completed training in either classroom or on-the-job training (OJT) during a one year period beginning July 1, 1986 and ending June 30, 1987. The data was reported in DOT code and crosswalked to CIP code.

Limitations within this reporting include the fact that the U.S. Department of Labor does not require detail on training programs and clients, and some clients are "recycled" through a number of training programs and could be counted several times because data are not available by Social Security number--only via DOT code. Often, JTPA classroom training occurs through the vocational education system. A JTPA trainee could potentially be counted in vocational education reporting, thus duplicating the counts of the available labor supply for a given occupation.

Job Corps reflects completers from one of three Job Corps training centers statewide. This information shows the number of persons by program category that returned to the state after completing a Job Corps training program or leaving with marketable skills during the period July 1, 1986 to June 30, 1987. A limitation in these data is that Job Corps centers are not required by any state or federal agency to report completer data. Tabulation of this information was done by the National Occupational Information Coordinating Committee (NOICC).

Priv School (Private School) includes completers from private training schools statewide, such as cosmetology schools, real estate schools, tax preparation schools, etc. Limitations: JTPA clients and Vocational Rehabilitation clients enrolled in postsecondary career school programs are counted in their respective management information systems as well as by the SOICC's survey of these schools. Unfortunately, those individuals are counted twice in the report's supply data.

Voc Rehab (Vocational Rehabilitation) refers to completers who have been trained with funds provided by Vocational Rehabilitation in the state. Data is reported by DOT code and crosswalked to CIP code.

Limitations in these data include that clients of Voc Rehab may receive services over an extended period of time and their entry into the labor market is not always known. Some clients may not be

obtaining specific occupational skills either; some may obtain generic skills that assist in overcoming handicaps. Job restructuring and job tailoring are key ingredients in vocational rehabilitation. After Voc Rehab training, some clients receive more training from other agencies, so the potential for duplication exists here.

Other supply sources not contained in this report, but which should be considered when making program training decisions include:

- Occupational transfers (those who transfer from one occupation to another).
- The number of people who migrate in/out of Montana.
- Job Service applicants: Job Service applicants provide a partial measure of the number of individuals seeking work through various employment agencies. Because the applicants are registered with Job Service, this measure of occupational supply covers only public sector agency registrants. This category is defined in the Analysis Information section of this publication.
- Re-entrants to the labor force due to change in economic conditions (displaced workers).

Analysis Information

The OIS contains analysis information made up of categories of data that include more definitive sources of occupational information.

Analysis information is printed for each cluster by the nine-digit Dictionary of Occupational Titles (DOT) code. Data in this report are from July 1, 1986 through June 30, 1987.

Analysis Data Elements:

Appren (Apprenticeship) information is collected from the Apprenticeship and Training Bureau, Employment Policy Division, Montana Department of Labor and Industry, and the U.S. Department of Labor, Bureau of Apprenticeship and Training. This information contains the number of completers of apprenticeship training programs statewide during a one-year period.

The information presented on apprenticeship program completers may be considered as adding to the supply in certain occupations, particularly in the construction industry where completers become a part of the labor pool for many different employers.

Mil Ret (Military Returnees) information is collected by the Department of Defense (DOD) through the Military Occupational Profile. The DOD captures the total number of people who are returning to Montana after being released from all sectors of the military for the period July 1, 1986 through June 30, 1987. This includes people who retire.

There are military occupations included in the DOD reporting that are not found in Montana's labor force. Although not all occupations in

the military are completely compatible with civilian occupations, they have many transferrable skills and must be considered. Occupations excluded from the analysis reports for compatibility reasons are:

<u>DOT Code</u>	<u>DOT Title</u>
193.382-010	Electronic Intelligence Operations Specialist
378.137-010	Infantry Unit Leader
378.227-018	Survival Specialist
378.367-010	Artillery or Naval Gunfire Observer
378.367-014	Field Artillery Operations Specialist
378.367-030	Reconnaissance Crewmember
378.382-018	Unattended-Ground-Sensor Specialist
378.464-010	Antitank Assault Gunner
378.683-010	Amphibian Crewmember
378.683-014	Powered Bridge Specialist
378.683-018	Tank Crewmember
378.684-014	Combat Rifle Crewmember
378.684-018	Field Artillery Crewmember
378.684-022	Infantry Indirect Fire Crewmember
378.684-026	Infantry Weapons Crewmember
378.684-030	Light Air Defense Artillery Crewmember
632.261-018	Ordnance Artificer
711.281-014	Instrument Mechanic, Weapons System
828.281-018	Missile Facilities Repairer
911.131-010	Boatswain
911.363-014	Quartermaster
911.364-010	Able Seaman
911.584-010	Marine Oiler
912.684-010	Parachute Rigger

Tot App (Total Applicants) and Tot Open (Total Openings) information contains data from the Job Service offices in Montana taken from the Employment Security Automated Reporting System (ESARS) reports. Approximately 95% of all unemployment insurance claimants are registered applicants through the Job Service.

Caution should be used when using this data. ESARS data is reported from Table B96. The specific DOT codes summarized on Table B96 are selected on the basis of importance to employment testing, labor certification, occupational analysis, and labor market information. Generally, the decision to display these DOT codes is based on two criteria:

- 1) Importance to the national labor market in the current program year indicated by receipt of over 1000 job openings in that particular DOT, and
- 2) Importance to program operations in the areas of employment testing, labor certification, occupational analysis, or labor market information during the current program year.

Avg Hrwage (Average Hourly Wage) information is taken from the "Fringe Benefit and Wage Information" publication provided by the Research and Analysis Bureau, Department of Labor and Industry. The information was obtained through a survey of employers doing business in private nonagricultural industries within Montana.

The analysis information should be used in conjunction with the supply of program completers and the estimated annual average job openings, along with any other information available for planning training programs.

Summary

In summary, statewide supply/demand data are extremely useful as a planning and counseling tool. As mentioned within each data reporting source, these data do have limitations. Each counselor's and planner's professional judgment, combined with all available local data, is paramount in the planning process.

If you encounter problems using this report or have suggestions to improve it, call the Montana SOICC at (406) 444-2741 for further information and explanation.
